The invention relates to polynucleotides (I) encoding diagnostic and therapeutic (DTHP) polypeptides (II), which include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate DTHP expression. For example, (I) and (II) may be used to treat disorders associated with decreased polypeptide expression by rectifying mutations or deletions in a patient's genome,

that affect the activity of the DITHPS, by expressing inactive proteins or supplementing the patient's own production of them. (1) and (II) may be used to treat disease, for example, cell proliferative disorder, crohn's disease, acquired immune deficiency syndrome (AIDS), lymphoma, leukaemia, autoimmune disorders, and respiratory disorders. Additionally, (I) may be used to produce the DITHPS, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (II) may also be used as antigens in the production of antibodies against DITHPP and in assays to identify modulators of DITHPP expression and activity. The anti-DITHPP antibodies and antigonists may also be used as diagnostic agents for detecting the presence of DITHPP in samples (e.g. by eazyme linked immunosorbant the presence of DITHPP in Samples (e.g. by eazyme linked immunosorbant and activity. The anti-DITHP imman diagnostic and the presence of DITHPP and antibodies and antibodies may also be used as diagnostic agents for detecting the presence of DITHPP in Samples (e.g. by eazyme linked immunosorbant and activity.) AASJ1196 represent human diagnostic and therapeutic (DITHP) polynucleotides of the invention. 82888888888888888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to human kinases (PKIN) and the nucleic acids encoding them. PKIN is used as vaccine and in gene therapy. PKIN is used in the prevention, diagnosis and treatment of diseases cancers, adenocarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease, acquired immune deficiency syndrome (AIDS), anaemia, asthma, allergies, gout, microbial infections, cardiovascular disease and/or inflammation, myasthenia gravis, atherosclerosis, cirrhosis, osteoporosis, myocardial infarction, cataract, growth and development disorder, seizure disorder, pulmonary embolism, Gaucher's disease, Inpid disorder, inpid storage disease, pick's disease, Tay-Sacks disease, renal disease and obesity. PKIN may be used to treat disorders associated with decreased PKIN expression by rectifying mutations or deletions in a patient's genome that affect the activity of PKN by expressing inactive proteins or to supplement the patients own production of PKIN PKIN nucleic acids may be used to produce the PKIN polypeptide, by inserting the nucleic acids into a chost cell and culturing the cell to express the protein. PKIN nucleic acids and its complementary sequences may also be used as DNA probes in a chost can and seaves to detect and quantitate the presence of similar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               acid sequences in samples and therefore which patients may be in restorative therapy. The present sequence is human PKIN-2 cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Yue H, Gandhi AR, Tribouley CM, Kearney L, Griffin JA, Nguyen DB;

Inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopotetic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. dathana), inflammatory disorders (e.g. asthana), inflammatory disorders (e.g. asthana), infectious disease (e.g. HIV) and reproductive disorders (e.g. infertility). Additionally, polynucleotides encoding protein kinases may be used for gene therapy and as DNA probes in diagnostic assays.

The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify
                                                                          AASO6701-AASO6757 encode for novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polynucleotides encoding protein kinases and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360

The present sequence encodes a kinase polypeptide. The kinase polynuclectides and polypeptides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polynucleotide sequence is useful as a source of probes and primers, which can be used to screen libraries, isolate

The present sequence encodes a kinase polypeptide. The kinase polynucleotides and polypeptides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polynucleotide sequence is useful as a source of probes and primers, which can be used to screen libraries, isolate clones, and prepare cloning and sequencing templates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated human kinase polynucleotide that shares structural similarity with animal kinases including calcium/calmodulin-dependent protein kinases and serine/threonine protein kinases, useful in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention discloses a novel polypeptide-human CaM kinase I 39.05, polynucleotide for coding the polypeptide and method for producing this polypeptide by DNA recombination technology. The polypeptide is useful for treating diseases such as nervous disease, arrhythmia, tumour and growth development disturbance disease. The present sequence represents the human CaM kinase I 39.05 polypeptide encoding CDNA.

and Human kinases and nucleic acids, useful for preventing diagnosing treating cancers, inflammation and immune disorders -

Claim 5; Page 159; 166pp; English.

cids encoding them. PRIN is used as vaccine and in gene therapy. PRIN is used in the prevention, diagnosis and treatment of diseases cancers, adenoma, leukemaia, sarcoma, immune disorder. Addison's disease, adenomar, leukemaia, sarcoma, immune disorder. Addison's disease, adenomar, leukemaia, sarcoma, immune disorder, Addison's disease, court microbial infections, cardiovascular disease and/or inflammation, mysathenia gravis, atherosclerosis, cirrhosis, osteoporosis, myccardial infarction, cataract, growth and development disorder, ipid storage disease, Pick's disease, Tay-Sachs disease, renal disease and obesity. PRIN may be used to treat disorders associated with decreased PRIN expression by rectifying mutations or deletions in a patient's genome that affect the activity of PRIN by expressing inactive proteins or to supplement the patients own production of PRIN. PRIN nucleic acids may be used to produce the PRIN polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. PRIN nucleic acids and its complementary sequences may also be used as DNA probes in cliangnostic assays to detect and quantitate the presence of similar nucleic acid summan because and contract sequences in samples and therefore which patients may be not of restorative therapy. The present sequence is human PRIN-11 The present invention relates to human kinases (PKIN) and the nucleic acids encoding them. PKIN is used as warming and the nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a kinase polypeptide. The kinase polynucleotides and polypeptides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polynucleotide sequence is useful as a source of
                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated human kinase polynucleotide that shares structural similarity with animal kinases including calcium/calmodulin-dependent protein kinases and serine/threonine protein kinases, useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                346

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3662-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
                                                                                                                                         Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ä

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δy
```

```
The present sequence is the coding sequence for Murine Dendritic Cell Kinase 3 (MDCK-3). The protein encoded by the present sequence is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, inflammatory diseases, tumours and bacterial, viral or fungal infection. MDCK-3 is a member of the Ca2+/calmodulin-dependent kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases, and for stimulating or suppressing immune responses

                                                                                                                                                                                                                                         394
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human death domain-containing receptor (DDCR) cDNA from HDPV291 clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The patent discloses novel death domain-containing receptor (DDCR) cDNAs and their corresponding proteins. DDCR cDNA and protein are used to prevent, treat or ameliorate a medical condition in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /product= "Human death domain-containing receptor"

syndrome (IndS), leukaemia) autoimmune diseases (e.g. systemic lupus erythematosus, rheumatoid arthritis), hyperproliferative disorders (e.g. nopplasms of the breast or liver), cerebroascular disorders (e.g. cardiac arrest), neurodegenerative diseases (e.g. Alzheimer's (e.g. cardiac arrest), neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), ocular disorders (e.g. corneal infection), degenerative diseases (e.g. spinal muscular atrophy-SMA), cancer, aberrant apoptosis, disorders of the placenta or uterus and infections caused by bacteria, viruses and fungi. The DDCR proteins infections caused by bacteria, viruses and fungi. The DDCR proteins to prevent skin aging due to sunburn, to maintain organs before transplantation, to support cell culture of primary tissues, to regenerate tissues and in chemotaxis. The DDCR sequences are used in correcting aberrant cellular apoptosis by gene therapy.

The present sequence is human death domain-containing receptor (DDCR) cDNCR) cDNCR icone HDPVZ91 (ATCC NO: PTAB39).

                                                                                                                                  that modulates cancer associated protein kinase function. The invention also relates to a method for diagnosing cancer comprising determining the upregulation of expression of a nucleic acid sequence encoding a protein kinase. The method is useful for diagnosing cancer. A protein kinase is besful for screening biological agents that modulate cancer associated protein kinase function. Downregulating the activity of protein kinase is useful for inhibiting the growth of a cancer cell, e.g. liver or colon cancer. A nucleic acid encoding protein kinase is useful to screen biopsy derived tumours and inflammatory samples such as arthritic synovium, for amplified DNA in the cell or increased expression of corresponding mRNA or protein and is also useful to detect differences in expression levels such as molecular weight, amino acid and nuclectide sequences between the two cells. The present sequence is human calmodulin kinase, CAMK-XI.
                                                                                                                        The invention relates to a method for screening biologically active agent
                                       comprises determining the upregulation of expression sequence encoding a protein kinase or upregulation of

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with noctropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, asch as peripheral nervous injuries, peripheral nervous system, as and and localised neuropathies and central nervous system diseases, aumoir ophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide
                                                                                                                                                                                                                                                                                                                                                Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; hamenostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the invention relates to polynucleotides (I) encoding diagnostic and therapeutic (DITHP) polypeptides (II), which include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and proteins involved in the prevention, diagnosis and treatment of diseases associated with inappropriate DITHP expression. For example, (I) and expression by rectifying mutations or deletions in a patient's genome, that affect the activity of the DITHPs, by expressing inactive proteins or supplementing the patient's own production of them. (I) and (II) may be used to treat diseases, for example, cell proliferative disorder. Crohn's disease, acquired immune deficiency syndrome (AIDS). Immphoma, leukaemia, autoimmune disorders, and respiratory disorders. Additionally, (I) may be used to produce the DITHPs, by inserting the nucleic acids into a host call and culturing the cell to express the protein. (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in

samples, and therefore which patients may be in need of restorative therapy. (II) may also be used as antigens in the production of antibodies against DITHPs and in assays to identify modulators of DITHP expression and activity. The anti-DITHP antibodies and antaqonists may also be used to down regulate expression and activity. The anti-DITHP antibodies may also be used as diagnostic agents for detecting the presence of DITHPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAG19415-AAG19525 represent human diagnostic and therapeutic (DITHP) polypeptides of the invention.

                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                      cidis encoding them. PRIN is used as vaccine and in gene therapy. PRIN is used in the prevention, diagnosis and treatment of diseases cancers, adenova, learners, adenova, edisease, adenovar, learners, adenovar, disease, adenovar, learners, adenovar, disease, adenovar, learners, astema, allergies, cquired immune deficiency syndrome (AIDS), anaemia, asthma, allergies, gout, microbial infections, cardiovascular disease and/or inflammation, infarction, cataract, growth and development disease and/or inflammation, infarction, cataract, growth and development disease and obesity. PRIN may be used to treat disorders associated with decreased PRIN expression by rectifying mutations or deletions in a patient's genome that affect the activity of PRIN by expressing inactive proteins or to supplement the patients own production of PRIN PRIN mucleic acids may be used to produce the PRIN polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. PRIN nucleic acids and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic assays to detect and quantitate the presence of similar concleance of restorative therapy. The present sequence is human PRIN-11

the encoded polypeptides (AAMA21213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Sydrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and considered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Wang D;

The polypeptide is useful for treating diseases such as nervous disease, arrhythmia, tumour and growth development disturbance disease. The present sequence represents the human CaM kinase I 39.05 polypeptide.

                                                                                          cids encoding them. PRIN is used as vaccine and in gene therapy. PRIN is used in the prevention, diagnosis and treatment of diseases cancers, adenovarionma, leukaemia, sarcoma, immune disorder, Addison's disease, adenovarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease, adenovarcinoma, leukaemia, sarcoma, immune disorder, asthma, allergies, gout, microbial infections, cardiovascular disease and/or inflammation, mysthenia gravis, atherosclerosis, cirrhosis, osteoporosis, myocardial infarction, cataract, growth and development disorder, lipid storage disease, pick's disease, Tay-Sachs disease, Inpid disorder, lipid storage disease, pick's disease, Tay-Sachs disease, renal disease and obesity. PKIN may be used to treat disorders associated with decreased PKIN expression by rectifying mutations or deletions in a patient's genome that affect the activity of PKIN by expressing inactive proteins or to supplement the patients own production of PKIN PKIN moleic acids may be used to produce the PKIN polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. PKIN nucleic acids and its complementary sequences may also be used as DMA probes in call and its complementary sequences may also be used as DMA probes in nucleic acid sequences in samples and therefore which patients may be incorporated and acid sequences in samples and therefore which patients may be incorporated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a kinase polypeptide. The kinase polynucleotides and polypeptides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polynuclectide sequence is useful as a source of probes and primers, which can be used to screen libraries, isolate clones, and prepare cloning and sequencing templates.

prevention, diagnosis and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of hematopoietic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological disorders (e.g. schlacophrenia), neurodegenerative disorders (e.g. parkinson's disease), inflammatory disorders (e.g. infertility).

Parkinson's disease), inflammatory disorders (e.g. infertility).
Additionally, polynucleotides encoding protein kinases may be used as antigens in the production of antibodies against the protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify modulators of protein kinase expression and activity.

                                                                                                                                                                                                                                                        The present sequence is Murine Dendritic Cell Kinase 3 (MDCK-3). This protein is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, inflammatory diseases, tumours and bacterial, viral or fungal infection. MDCK-3 is a member of the Ca2+/calmodulin-dependent kinase
                                                                               Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases, and for stimulating or suppressing immune responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          238

                                                                                                                                                                               The present sequence represents a kinase polypeptide. The kinase polymorlectides and polypeptides are useful in therapeutic, diagnostic and pharmacogenic applications. They are useful for the detection of mutant kinases, or inappropriately expressed kinases for the diagnosis of a disease or disorder. They are useful for screening for drugs (or high throughput screening of combinatorial libraries) effective in the treatment of symptomatic or phenotypic manifestations of that disease or disorder. The polymucleotide sequence is useful as a source of probes and primers, which can be used to screen libraries, isolate clones, and prepare cloning and sequencing templates.
                                                                                                           Novel isolated human kinase polynucleotide that shares structural similarity with animal kinases including calcium/calmodulin-dependent protein kinases and serine/threonine protein kinases, useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                238

                                                                                                                                                5
given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated

pcWY-SPORT6: Site_1: Not1: Site_2: EccRV (destroyed): RNA
source anonymous pool of 6 male brains, age range 23-27; and almale testis, age 69. Library is
nale lung, age 27; and 1 male testis, age 69. Library is
oligo-dT primed and directionally cloned (EccRV site is
destroyed upon cloning). Average insert size 1.9 kb,
insert size range 1-3 kb. Library is normalized and
enriched for full-length clones and was constructed by C.
